SUBCHAPTER II—DRUG-FREE  
COMMUNITIES

**§ 1521. Findings**

Congress finds the following:

(1) Substance abuse among youth has more than doubled in the 5-year period preceding 1996, with substantial increases in the use of marijuana, inhalants, cocaine, methamphetamine, LSD, and heroin.

(2) The most dramatic increases in substance abuse has occurred among 13- and 14-year-olds.

(3) Casual or periodic substance abuse by youth today will contribute to hard core or chronic substance abuse by the next generation of adults.

(4) Substance abuse is at the core of other problems, such as rising violent teenage and violent gang crime, increasing health care costs, HIV infections, teenage pregnancy, high school dropouts, and lower economic productivity.

(5) Increases in substance abuse among youth are due in large part to an erosion of understanding by youth of the high risks associated with substance abuse, and to the softening of peer norms against use.

(6)(A) Substance abuse is a preventable behavior and a treatable disease; and

(B)(i) during the 13-year period beginning with 1979, monthly use of illegal drugs among youth 12 to 17 years of age declined by over 70 percent; and

(ii) data suggests that if parents would simply talk to their children regularly about the dangers of substance abuse, use among youth could be expected to decline by as much as 30 percent.

(7) Community anti-drug coalitions throughout the United States are successfully developing and implementing comprehensive, long-term strategies to reduce substance abuse among youth on a sustained basis.

(8) Intergovernmental cooperation and coordination through national, State, and local or tribal leadership and partnerships are critical to facilitate the reduction of substance abuse among youth in communities throughout the United States.

(Pub. L. 100-690, title I, §1021, as added Pub. L. 105-20, §2(a)(2), June 27, 1997, 111 Stat. 224.)

FIVE-YEAR EXTENSION OF DRUG-FREE COMMUNITIES  
SUPPORT PROGRAM

Pub. L. 107-82, §1(a), Dec. 14, 2001, 115 Stat. 814, provided that: "Congress makes the following findings:

"(1) In the next 15 years, the youth population in the United States will grow by 21 percent, adding 6,500,000 youth to the population of the United States. Even if drug use rates remain constant, there will be a huge surge in drug-related problems, such as academic failure, drug-related violence, and HIV incidence, simply due to this population increase.

"(2) According to the 1994-1996 National Household Survey, 60 percent of students age 12 to 17 who frequently cut classes and who reported delinquent behavior in the past 6 months used marijuana 52 days or more in the previous year.

"(3) The 2000 Washington Kids Count survey conducted by the University of Washington reported that students whose peers have little or no involvement with drinking and drugs have higher math and reading scores than students whose peers had low level drinking or drug use.

"(4) Substance abuse prevention works. In 1999, only 10 percent of teens saw marijuana users as popular, compared to 17 percent in 1998 and 19 percent in 1997. The rate of past-month use of any drug among 12- to 17-year-olds declined 26 percent between 1997 and 1999. Marijuana use for sixth through eighth graders is at the lowest point in 5 years, as is use of cocaine, inhalants, and hallucinogens.

"(5) Community Anti-Drug Coalitions throughout the United States are successfully developing and implementing comprehensive, long-term strategies to reduce substance abuse among youth on a sustained basis. For example:

"(A) The Boston Coalition brought college and university presidents together to create the Cooperative Agreement on Underage Drinking. This agreement represents the first coordinated effort of Boston's many institutions of higher education to address issues such as binge drinking, underage drinking, and changing the norms surrounding alcohol abuse that exist on college and university campuses.

"(B) In 2000, the Coalition for a Drug-Free Greater Cincinnati surveyed more than 47,000 local students in grades 7 through 12. The results provided evidence that the Coalition's initiatives are working. For the first time in a decade, teen drug use in Greater Cincinnati appears to be leveling off. The data collected from the survey has served as a tool to strengthen relationships between schools and communities, as well as facilitate the growth of anti-drug coalitions in communities where such coalitions had not existed.

"(C) The Miami Coalition used a three-part strategy to decrease the percentage of high school seniors who reported using marijuana at least once during the most recent 30-day period. The development of a media strategy, the creation of a network of prevention agencies, and discussions with high school students about the dangers of marijuana all contributed to a decrease in the percentage of seniors who reported using marijuana from over 22 percent in 1995 to 9 percent in 1997. The Miami Coalition was able to achieve these results while national rates of marijuana use were increasing.

"(D) The Nashville Prevention Partnership worked with elementary and middle school children in an attempt to influence them toward positive life goals and discourage them from using substances. The Partnership targeted an area in East Nashville and created after school programs, mentoring opportunities, attendance initiatives, and safe passages to and from school. Attendance and test scores increased as a result of the program.

"(E) At a youth-led town meeting sponsored by the Bering Strait Community Partnership in Nome, Alaska, youth identified a need for a safe, substance-free space. With help from a variety of community partners, the Partnership staff and youth members created the Java Hut, a substance-free coffeehouse designed for youth. The Java Hut is helping to change norms in the community by providing a fun, youth-friendly atmosphere and activities that are not centered around alcohol or marijuana.

"(F) Portland's Regional Drug Initiative (RDI) has promoted the establishment of drug-free workplaces among the city's large and small employers. Over 3,000 employers have attended an RDI training session, and of those, 92 percent have instituted drug-free workplace policies. As a result, there has been a 5.5 percent decrease in positive workplace drug tests.

"(G) San Antonio Fighting Back worked to increase the age at which youth first used illegal sub-
