sion of title I of Pub. L. 102-154, set out as a note under section 31 of Title 43, Public Lands.

#### § 1124. Research and development

- (a) The Chairman, acting through the appropriate Federal agencies and in cooperation with non-Federal entities, shall initiate a research and development program for the purpose of resolving all major technical problems inhibiting the fullest possible commercial utilization of geothermal resources in the United States. The specific goals of such programs shall include—
  - (1) the development of effective and efficient drilling methods to operate at high temperatures in formations of geothermal interest;
  - (2) the development of reliable predictive methods and control techniques for the production of geothermal resources from reservoirs:
  - (3) the exploitation of new concepts for fracturing rock to permit recovery of contained heat reserves;
  - (4) the improvement of equipment and technology for the extraction of geothermal resources from reservoirs:
  - (5) the development of improved methods for converting geothermal resources and byproducts to useful forms;
  - (6) the development of improved methods for controlling emissions and wastes from geothermal utilization facilities, including new monitoring methods to any extent necessary;
  - (7) the development and evaluation of waste disposal control technologies and the evaluation of surface and subsurface environmental effects of geothermal development:
  - (8) the improvement of the technical capability to predict environmental impacts resulting from the development of geothermal resources, the preparation of environmental impact statements, and the assuring of compliance with applicable standards and criteria;
  - (9) the identification of social, legal, and economic problems associated with geothermal development (both locally and regionally) for the purpose of developing policy and providing a framework of policy alternatives for the commercial utilization of geothermal resources:
  - (10) the provision for an adequate supply of scientists to perform required geothermal research and development activities; and
  - (11) the establishment of a program to encourage States to establish and maintain geothermal resources clearinghouses, which shall serve to (A) provide geothermal resources developers with information with respect to applicable local, State, and Federal laws, rules, and regulations, (B) coordinate the processing of permit applications, impact statements, and other information which geothermal resources developers are required to provide, (C) encourage uniformity with respect to local and State laws, rules, and regulations with respect to geothermal resources development, and (D) encourage establishment of land use plans, which would include zoning for geothermal resources development and which would assure that geothermal resources developers will be able to carry out development programs to the production stage.

(b) The Chairman, acting through the appropriate Federal agencies and in cooperation with non-Federal entities, shall implement a coordinated program of research and development in order to demonstrate the technical means for the extraction and utilization of the resource base, including any by-products of such base, and in order to accomplish the goals established by subsection (a). Research authorized by this chapter having potential applications in matters other than geothermal energy may be pursued to the extent that the findings of such research can be published in a form for utilization by others.

# § 1125. Geothermal demonstration plants and projects

### (a) Design and construction

The Chairman, acting through the appropriate Federal agencies and in cooperation with non-Federal entities, shall initiate a program to design and construct geothermal demonstration plants. The specific goals of such program shall include—

- (1) the development of economical geothermal resources production systems and components which meet environmental standards;
- (2) the design of plants to produce electric power and, where appropriate, the large-scale production and utilization of any useful byproducts;
- (3) the involvement of engineers, analysts, technicians, and managers from industry field and powerplant development, which shall lead to the early industrial exploitation of advanced geothermal resources;
- (4) the provision for an adequate supply of trained geothermal engineers and technicians;
- (5) the provision of experimental test beds for component testing an evaluation by laboratories operated by the Federal Government, industry, or institutions of higher education;
- (6) the construction and operation of pilot plants; and
- (7) the construction and operation of demonstration plants.

### (b) Establishment of demonstration projects

In carrying out his responsibilities under this section, the Chairman, acting through the appropriate Federal agencies, and in cooperation with non-Federal entities, may provide for the establishment of one or more demonstration projects utilizing each geothermal resource base involved, which shall include, as appropriate, all of the exploration, siting, drilling, pilot plant construction and operation, demonstration plant construction and operation, and other facilities and activities which may be necessary for the generation of electric energy and the utilization of geothermal resource byproducts.

# (c) Agreements for the cooperative development of facilities for demonstration

The Chairman, acting through the appropriate Federal agencies, is authorized to investigate and enter into agreements for the cooperative
