(2) the term “satellite terminal station” refers to a complex of communication equipment located on the earth’s surface, operationally connected with one or more terrestrial communication systems, and capable of transmitting telecommunications to or receiving telecommunications from a communications satellite system.¹

(3) the term “communications satellite” means an earth satellite which is intentionally used to relay telecommunication information;

(4) the term “associated equipment and facilities” refers to facilities other than satellite terminal stations and communications satellites, to be constructed and operated for the primary purpose of a communications satellite system, whether for administration and management, for research and development, or for direct support of space operations;

(5) the term “research and development” refers to the conception, design, and first creation of experimental or prototype operational devices for the operation of a communications satellite system, including the assembly of separate components into a working whole, as distinguished from the term “production,” which relates to the construction of such devices to fixed specifications compatible with repetitive duplication for operational applications; and²

(6) the term “telecommunication” means any transmission, emission or reception of signs, signals, writings, images, and sounds or intelligence of any nature by wire, radio, optical, or other electromagnetic systems.¹
