

(11) The discovery of a relatively simple and inexpensive means of interrupting the transmission of HIV from an infected mother to the unborn child—namely with nevirapine (NVP), which costs US\$4 a tablet—has created a great opportunity for an unprecedented partnership between the United States Government and the governments of Asian, African and Latin American countries to reduce mother-to-child transmission (also known as “vertical transmission”) of HIV.

(12) According to UNAIDS, if implemented this strategy will decrease the proportion of orphans that are HIV-infected and decrease infant and child mortality rates in these developing regions.

(13) A mother-to-child antiretroviral drug strategy can be a force for social change, providing the opportunity and impetus needed to address often long-standing problems of inadequate services and the profound stigma associated with HIV-infection and the AIDS disease. Strengthening the health infrastructure to improve mother-and-child health, antenatal, delivery and postnatal services, and couples counseling generates enormous spillover effects toward combating the AIDS epidemic in developing regions.

(14) United States Census Bureau statistics show life expectancy in sub-Saharan Africa falling to around 30 years of age within a decade, the lowest in a century, and project life expectancy in 2010 to be 29 years of age in Botswana, 30 years of age in Swaziland, 33 years of age in Namibia and Zimbabwe, and 36 years of age in South Africa, Malawi, and Rwanda, in contrast to a life expectancy of 70 years of age in many of the countries without a high prevalence of AIDS.

(15) A January 2000 United States National Intelligence Estimate (NIE) report on the global infectious disease threat concluded that the economic costs of infectious diseases—especially HIV/AIDS—are already significant and could reduce GDP by as much as 20 percent or more by 2010 in some sub-Saharan African nations.

(16) According to the same NIE report, HIV prevalence among militias in Angola and the Democratic Republic of the Congo are estimated at 40 to 60 percent, and at 15 to 30 percent in Tanzania.

(17) The HIV/AIDS epidemic is of increasing concern in other regions of the world, with UNAIDS estimating that there are more than 5,600,000 cases in South and South-east Asia, that the rate of HIV infection in the Caribbean is second only to sub-Saharan Africa, and that HIV infections have doubled in just 2 years in the former Soviet Union.

(18) Despite the discouraging statistics on the spread of HIV/AIDS, some developing nations—such as Uganda, Senegal, and Thailand—have implemented prevention programs that have substantially curbed the rate of HIV infection.

(19) AIDS, like all diseases, knows no national boundaries, and there is no certitude that the scale of the problem in one continent can be contained within that region.

(20) Accordingly, United States financial support for medical research, education, and

disease containment as a global strategy has beneficial ramifications for millions of Americans and their families who are affected by this disease, and the entire population which is potentially susceptible.

(b) Purposes

The purposes of this chapter are to—

(1) help prevent human suffering through the prevention, diagnosis, and treatment of HIV/AIDS; and

(2) help ensure the viability of economic development, stability, and national security in the developing world by advancing research to—

(A) understand the causes associated with HIV/AIDS in developing countries; and

(B) assist in the development of an AIDS vaccine.

SUBCHAPTER I—UNITED STATES ASSISTANCE

§ 6811. Coordinated donor strategy for support and education of orphans in sub-Saharan Africa

(a) Statement of policy

It is in the national interest of the United States to assist in mitigating the burden that will be placed on sub-Saharan African social, economic, and political institutions as these institutions struggle with the consequences of a dramatically increasing AIDS orphan population, many of whom are themselves infected by HIV and living with AIDS. Effectively addressing that burden and its consequences in sub-Saharan Africa will require a coordinated multidonor strategy.

(b) Development of strategy

The President shall coordinate the development of a multidonor strategy to provide for the support and education of AIDS orphans and the families, communities, and institutions most affected by the HIV/AIDS epidemic in sub-Saharan Africa.

(c) Definition

In this section, the term “HIV/AIDS” means, with respect to an individual, an individual who is infected with the human immunodeficiency virus (HIV), the pathogen that causes the acquired immune deficiency virus (AIDS), or living with AIDS.

(Pub. L. 106-264, title I, §113, Aug. 19, 2000, 114 Stat. 753.)

§ 6812. African crisis response initiative and HIV/AIDS training

(a) Findings

Congress finds that—

(1) the spread of HIV/AIDS constitutes a threat to security in Africa;

(2) civil unrest and war may contribute to the spread of the disease to different parts of the continent;

(3) the percentage of soldiers in African militaries who are infected with HIV/AIDS is un-
