§ 5302. Findings

The Congress finds that—

(1) the macroeconomic policies, including the exchange rate policies, of the leading industrialized nations require improved coordination and are not consistent with long-term economic growth and financial stability;

(2) currency values have a major role in determining the patterns of production and trade in the world economy;

(3) the rise in the value of the dollar in the early 1980's contributed substantially to our current trade deficit;

(4) exchange rates among major trading nations have become increasingly volatile and a pattern of exchange rates has at times developed which contribute to substantial and persistent imbalances in the flow of goods and services between nations, imposing serious strains on the world trading system and frustrating both business and government planning;

(5) capital flows between nations have become very large compared to trade flows, respond at times quickly and dramatically to policy and economic changes, and, for these reasons, contribute significantly to uncertainty in financial markets, the volatility of exchange rates, and the development of exchange rates which produce imbalances in the flow of goods and services between nations;

(6) policy initiatives by some major trading nations that manipulate the value of their currencies in relation to the United States dollar to gain competitive advantage continue to create serious competitive problems for United States industries;

(7) a more stable exchange rate for the dollar at a level consistent with a more appropriate and sustainable balance in the United States current account should be a major focus of national economic policy;

(8) procedures for improving the coordination of macroeconomic policy need to be strengthened considerably; and

(9) under appropriate circumstances, intervention by the United States in foreign exchange markets as part of a coordinated international strategic intervention effort could produce more orderly adjustment of foreign exchange markets and, in combination with necessary macroeconomic policy changes, assist adjustment toward a more appropriate and sustainable balance in current accounts.

§ 5303. Statement of policy

It is the policy of the United States that—

(1) the United States and the other major industrialized countries should take steps to continue the process of coordinating monetary, fiscal, and structural policies initiated in the Plaza Agreement of September 1985;

(2) the goal of the United States in international economic negotiations should be to
